

Planning, Scheduling and Coordination Work Shop

Planning, Scheduling and Coordination is the “Heart” of asset management. The best PM and Pdm maintenance program can identify failure modes but resources to repair are identified, planned, procured, and scheduled through Planning, Scheduling and Coordination.

By employing good planning and scheduling practices, life cycle cost of assets will be minimized through lower maintenance and operating cost and higher equipment availability.

A workforce who is knowledgeable and skilled in applying these best practices contributes to higher customer satisfaction. Product quality and lower costs.

Planning, Scheduling and Coordination Training followed by Planning, Scheduling and Coordination Work Shop will assist in meeting your business objectives.

Planning, Scheduling and Coordination Work Shop is intended for personnel who are actively planning, scheduling and coordinating work. This on-site session takes World Class Planning, Scheduling and Coordination practices and applies them to your work in your environment.
