

Stop quality defects, unplanned downtime, and accidents by eliminating the root of the problem.

Don't live with chronic losses, fix them.

MET-DEMAND

Building strong local industries and communities to compete globally

ROOT CAUSE ANALYSIS (RCA)

A Reliable Capacity® Strategy

Problem Solving and Change Management are processes which must be structured, consistently used and improved for your organization to be competitive.

Plan-Do-Check-Act:

1. Identify the issues
2. Prioritize issues
3. Clearly identify scope of a problem
4. Describe possible causes
5. Develop workable solutions
6. Implement process changes
7. Review and evaluate
8. Analyze learnings, recommend changes, and train

- Learn the basic tools of RCA.
- Learn what makes a good problem statement and an effective action plan.
- Turn a problem into an opportunity.
- Learn how to tie RCA process to site's improvement efforts.

What can your Organization Accomplish with RCA?

Root Cause Analysis (RCA) is a structured process which determines the "root cause" of an abnormal state and improves the process by implementing countermeasures to permanently eliminate the root cause.

The result is improved performance, lower costs, and increased productivity. Learn an eight step process and improve your organization's bottom line.

A food company decreased the variation in a recipe, eliminating rework and increases line speeds which resulted in a 250K/yr cost savings.

A Food Ingredient Company eliminated a cross contamination and a Quality Issue which prevented the lost of a major customer.

An extrusion operation decreased downtime by 600 hours through elimination of reoccurring failure modes.

Met Demand, Inc can assist your organization in implementing an effective planning and Scheduling Program.
